**oneSOURCE Announces New Database for Facilities Maintenance**

*With thousands of Preventative Maintenance Service Manuals and growing, oneSOURCE arms healthcare facility management professionals with 24/7 access to critical materials for keeping patients and staff safe*

SALT LAKE CITY, UTAH (Feb. 11, 2020) - Today, [oneSOURCE](#), a leading healthcare management solution, launched its highly anticipated Facilities Maintenance database for use in healthcare facilities across the country. This premium non-medical system maintenance and care solution is added to the company's already robust offerings in the tissues/implants, biomedical, dental and surgical and equipment sectors.

"In the last year, The Joint Commission has reinforced and emphasized their structured guidelines and regulations for a hospital's healthcare facility management department and we are confident that our new, comprehensive database will allow those professionals to get their job done easily and effectively," said Jack Speer, co-founder and president of oneSOURCE. "It's more important than ever that team members have immediate access to large volumes of manufacturer manuals and guidance documents in order to demonstrate systemic competence."

The Facilities Maintenance database includes all non-medical grade equipment utilized in a hospital or a large facility. Manuals and parts list are a primary focus in the database in addition to fire protection equipment, emergency lighting systems, various alarms, elevators and more. In addition to having thousands of preventative maintenance service manuals available, customers will benefit from having access to an experienced oneSOURCE point person to help organize and customize the database to meet the The Joint Commission's Active list requirements as well as handle specific document requests directly from the manufacturer. oneSOURCE is also equipped to load and house any proprietary documents and integrates with all the CMMS software companies providing one location for retrieval of information and seamless integration.

"By bridging the gap between the facility and the manufacturer, we're able to save our customers time and money all while serving up a superior solution," said Heather Thomas, CMO and executive VP of sales and marketing of oneSOURCE. "It is the most cost-effective way to comply with the fact that manuals must be housed on-site and made readily available to technicians. From facility maintenance plans to service manuals, oneSOURCE has centralized all necessary materials for this vertical in one place in hopes we can continue to keep patient and staff safety the main priority."

Since 2009, oneSOURCE's platforms have been a reliable resource for top healthcare organizations such as Mayo Clinic, Sutter Health, VHA and HCA and currently dominates the sterile processing market with more than 80 percent saturation. Along with this exciting release, the company is working expeditiously to launch a Speakers Bureau that will allow experts in the field to provide support and presentations for a particular interest group.
